Welcome to **MEDSTOCK**

Medstock, one of Australia's fastest-growing manufacturers and distributors of medical dressings, is proudly owned and operated by practicing Australian medical professionals. We are united by a shared goal: to provide a superior yet affordable range of medical products to various healthcare facilities. Our products cater to the diverse needs of wound care clinics, general practices, aged care facilities, pharmacies, nursing agencies, and hospitals. We are committed to maintaining the highest standards in the manufacture and distribution of healthcare supplies.

Why choose us?

Customer-Focused Care

Customer care goes beyond mere words—it underpins our operations. We're fully committed to understanding the unique requirements of each client and tailoring solutions to meet these needs.

Product Quality

As a leader in the wound care sector, we stay at the forefront of product quality. Our strict manufacturing standards (ISO 9001 and ISO 13485) ensure our products not only meet but often surpass industry standards, thereby enhancing patient outcomes.

Unique Colour-Coded Packing

To enhance efficiency and accuracy, we offer unique colour-coded packaging for our products. This feature facilitates easy identification and helps minimise errors by ensuring the correct product is used for the right purpose.

Cost-Effective

We endeavour to strike a balance between delivering high-quality products and cost-effectiveness. Understanding the financial pressures in the healthcare sector, we strive to provide affordable solutions without compromising on quality.

Clinical Support and Education

Our commitment extends beyond offering superior medical products. We offer extensive clinical support and education, delivered by our team of medical professionals. We're dedicated to supplying educational resources, aiding healthcare professionals to stay current with evolving wound care practices.

Australia Owned and Operated

Pride is taken in being an Australian-owned and operated company. This affords us an intrinsic understanding of the local healthcare landscape, enabling us to tailor our products and services to meet the specific needs of Australian healthcare providers.

MEDSTOCK FABRIC ISLAND

Multi-purpose island dressing with good adhesive strength

Basic Wound Care

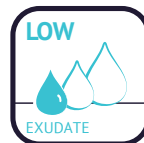

Medstock Fabric Island Dressing is a soft and comfortable adhesive dressing made of a highly breathable spunlace non-woven fabric and a gentle fabric absorption pad.

Key Functions and Features:

- + Provides an occlusive yet breathable environment optimal for wound healing
- + Soft, conformable, and comfortable to wear
- + Hypoallergenic
- + Strong and secure adhesion to skin
- + Simple application

Indications for Use:

- + Suitable for wounds with nil to mild exudate
- + Grazes, abrasions and superficial burns
- + Surgical wounds
- + Retention dressing for alginates, hydrogels and hydrocolloid pastes

MEDSTOCK NON-STICK PAD

Absorbs up to 8 times its own weight

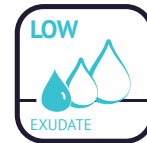

Medstock Non-Stick Pad is an absorptive non-woven dressing suitable for a wide variety of wound types. It is made with a heat-laminated porous film skin contact layer that prevents it from sticking to the moist wound bed.

Key Functions and Features:

- + Soft, conformable, and comfortable to wear
- + Can be cut to the required shape and size of the wound
- + Provides protection for fragile tissue with its low-adherent properties

Indications for Use:

- + Suitable for wounds with nil to mild exudate
- + Grazes, abrasions and superficial burns
- + Surgical wounds

MEDSTOCK

TRANSPARENT FILM

High moisture vapour transmission rate for optimal moisture management

Basic Wound Care

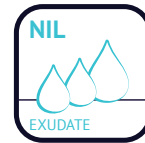

Medstock Transparent Film Dressing is a waterproof polyurethane (PU) adhesive film dressing designed to promote moist wound healing by retaining natural wound exudates as well as allowing excess exudate to evaporate.

Key Functions and Features:

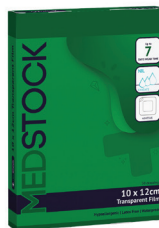

- + Flexible and conformable to body contours, ensuring enhanced patient comfort
- + Waterproof protective film makes it impermeable to water and body fluids, allowing area to be washed
- + Transparent film allows assessment of the wound bed underneath
- + Coated with a hypoallergenic pressure sensitive adhesive that provides secure adhesion
- + Highly breathable
- + Allows for faster healing and avoids maceration by retaining natural wound exudates and allowing excess exudates to evaporate

Indications for Use:

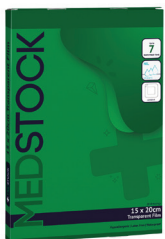

- + Suitable for wounds with nil to very low exudate
- + Ideal for epithelialising wounds
- + Waterproof film can be used in various situations where fixation is required on a wide variety of dressings, tubes, catheters, drains, and other medical devices
- + Can be used directly over superficial wounds (superficial burns/scalds, abrasions, grazes, and cuts)
- + Can be applied over surgical wounds to spread force and reduce suture load

MEDSTOCK

TRANSPARENT ISLAND

Highly permeable waterproof island Dressing

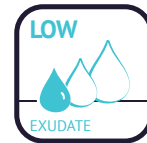

Medstock Transparent Island Dressing is a highly permeable polyurethane (PU) film dressing coated with a quality medical-grade acrylic adhesive and featuring a gentle fabric absorption pad.

Key Functions and Features:

- + Waterproof, conformable and comfortable to wear
- + Prevents bacterial invasion and accelerates wound healing
- + Highly breathable

Indications for Use:

- + Suitable for wounds with nil to mild exudate
- + Grazes, abrasions and superficial burns
- + Post surgical wounds

MEDSTOCK WOUND CLOSURE

Effective in preventing scar formation

Basic Wound Care

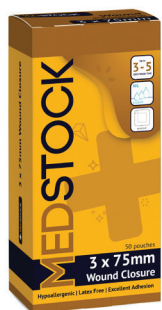

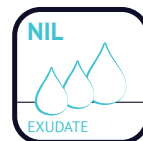

Medstock Wound Closures are non-invasive, adhesive skin closure devices that are designed to provide comfortable support that facilitates quick wound closure.

Key Functions and Features:

- + Made from high-quality non-woven fabric
- + Good adhesive strength for secure adhesion
- + Provides effective wound support to assist wound closure
- + Non-invasive technology helps reduce risk of infection and scar formation
- + Reduces need for wound sutures

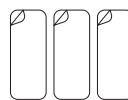

Indications for Use:

- + Closure of lacerations and surgical incisions
- + Can be used in conjunction with sutures and staples
- + Supports wound after sutures/staples have been removed

MEDSTOCK KIDAROOS SILICONE PLASTER

Children's Plasters

Innovative, kid-friendly plasters
perfect for healing young skin

Medstock Kidaroos Silicone Plaster combine advanced healing technology with fun and creative designs, making them the ideal choice for treating minor wounds in young children and infants.

With their state-of-the-art silicone gel construction, Kidaroos plasters sit securely over wounds, but can be removed without causing pain or damaging young, sensitive, fragile or allergic skin. They allow the skin to breathe, while creating a barrier against moisture and bacteria. Plus, they maintain their adhesive quality even after being moved or lifted multiple times to check healing.

High-performance plaster strips engineered for kids:

Unlike most plaster strips, Medstock Kidaroos are custom-built for delicate, sensitive young skin.

- + Cutting edge silicone adhesive technology
- + Waterproof backing to protect wounds from water, bacteria and foreign material
- + Breathable design
- + Absorbent, non-adhesive pad that helps stop bleeding
- + Secure adhesion to maximise wear time
- + Conforming design to fit young bodies
- + Fast, easy and painless removal
- + 2 sizes ideal for families with children of different ages

Fast, easy and effective care for children's minor wounds

Treating wounds in children presents some unique challenges. Smaller wounds in hard-to-reach places can make it difficult for dressings to fit snugly.

Dressings must be comfortable to stop kids fiddling with them, as well as strong enough to cope with energetic young bodies.

Children are more sensitive to dressing changes, which can make them painful and traumatic. Medstock Kidaroos plasters are specifically designed to solve these issues.

MEDSTOCK

ALGINATE DRESSING

Highly absorbent, fast gelling
Calcium Alginate

Advanced Wound Care

Medstock Alginate Dressing is a naturally derived, non-woven dressing made of 100% calcium alginate fibres that effectively absorbs exudate and provides a moist healing environment.

Key Functions and Features:

Medstock Alginate Dressing consists of an innovative blend of mannuronic and guluronic acid fibres with high dry and wet tensile strength which helps to:

- + Absorb moderate to high levels of exudate
- + Form a moist gel over wound bed for optimal wound healing
- + Alleviate pain to wound by hydrating and protecting nerve endings
- + Reduce infection risk by trapping bacteria between fibres
- + Conform to wound contours
- + Reduce foreign body retention

Indications for Use:

- + For moderately to heavily exuding wounds
- + Ulcers, sinuses, and open cavities
- + Surgical wounds where exudate exists
- + Superficial to partial thickness burns
- + Skin donor sites
- + May promote haemostasis in bleeding wounds

MEDSTOCK FOAM

NON-ADHESIVE

Flexible and comfortable foam dressing that provides rapid exudate absorption.

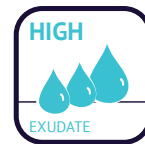

Medstock Foam Non-Adhesive Dressing is a highly absorbent polyurethane foam dressing that contains carboxymethylcellulose (CMC) hydrophilic granules, which promote and maintain a balanced, moist healing environment.

Key Functions and Features:

- + High absorbency and fluid handling capacity
- + Non-adherent to the wound, preventing damage to healing tissue
- + Soft, elastic and comfortable on the skin
- + Provides cushioning for wound protection
- + Reduces the risk of maceration to wound and periwound area while ensuring a moist wound healing environment
- + Ability to vertically wick exudate away from the wound and hold exudate in the core of the foam
- + Surface layer consists of a semi-permeable polyurethane film to protect the wound against water, bacteria, and foreign matter
- + Provides odour control for malodorous wounds

Indications for Use:

- + Suitable for wounds with low to high exudate
- + Adaptable to different phases of wound healing
- + Pressure ulcers
- + Venous ulcers
- + Arterial ulcers
- + Mixed aetiology ulcers
- + Partial-thickness burns

MEDSTOCK

THIN

HYDROCOLLOID

Moisture donating gel forming dressing to promote healing in dry wounds

Advanced Wound Care

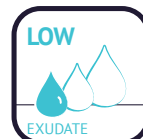

Medstock Thin Hydrocolloid Dressing is a highly elastic, adhesive dressing embedded with carboxymethylcellulose (CMC) hydrophilic granules that help promote a moist wound healing environment. Its elastic, pressure-sensitive adhesive design makes it suitable and easy to apply to most body parts.

Key Functions and Features:

- + Embedded hydrophilic carboxymethylcellulose (CMC) granules help to maintain a moist environment that promotes wound healing.
- + Waterproof barrier against water and bacteria
- + Facilitates autolytic debridement of the wound
- + Forms a gel on the wound surface, which assists in maintaining a moist healing environment
- + Excellent elasticity which provides comfort and flexibility, even over highly mobile areas such as joints
- + May reduce pain by keeping exposed nerve endings moist

Indications for Use:

- + Suitable for wounds with nil to low exudate
- + Treatment of stage I and II pressure injuries
Abrasions and grazes
- + Small, superficial to partial thickness burns
- + Shallow ulcers where low exudate exists
- + Skin grafts, donor sites, and surgical wounds
- + Suitable for necrotic wounds to rehydrate and facilitate debridement
- + Scar management
- + Gentle debridement of haematomas when used in conjunction with a hydrogel

MEDSTOCK SILICONE FOAMLITE WITH BORDER

Atraumatic dressing for lightly exuding wounds

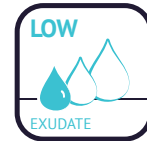

Medstock Silicone Foam Lite with Border is a thin profiled, 4-layer silicone adhesive foam dressing that is gentle and conformable to fragile skin.

Key Functions and Features:

- + Thin profile design provides comfortable, cushioned healing
- + The silicone contact layer seals the wound edges, reducing risk of maceration to the periwound
- + Soft, elastic, and comfortable on the skin
- + Protective barrier against water and bacteria
- + Gentle and secure adherence
- + Atraumatic on dressing removal
- + Maintains a moist wound environment to promote healing

Indications for Use:

- + Suitable for wounds with nil to low exudate
- + Traumatic wounds (including abrasions, skin tears, and blisters)
- + Surgical wounds
- + Low exuding ulcers
- + Protection of compromised or fragile skin

MEDSTOCK SILICONE FOAM WITH BORDER

Highly absorbent and atraumatic to fragile skin

Medstock Silicone Foam with Border is a 5-layered foam dressing that is both highly absorbent and gentle on fragile wound tissue. Its silicone adhesive skin contact layer provides secure adhesion whilst reducing the risk of epidermal stripping on removal.

Key Functions and Features:

- + Waterproof
- + Features a perforated silicone skin contact layer for gentle adhesion and atraumatic removal
- + High absorbency for efficient exudate management
- + Retains exudate away from wound
- + Seals wound edges to reduce the risk of lateral exudate leakage causing maceration
- + May assist in protecting against extrinsic forces such as pressure, shearing, and friction
- + Soft, elastic, and comfortable on the skin
- + Protective barrier against water and bacteria
- + Gentle and secure adherence
- + Maintains a moist wound environment to promote healing
- + Can be lifted and adjusted without losing its adhesive properties

Indications for Use:

- + Suitable for wounds with moderate to high exudate
- + Skin tear management
- + Partial-thickness burns
- + Surgical wounds
- + Pressure ulcers
- + Venous ulcers
- + Arterial ulcers
- + Mixed aetiology ulcers
- + Preventative management for areas at risk of pressure injury

MEDSTOCK SUPER ABSORBER

Cost-effective, skin protective dressing
ideal for high exudate wounds

Medstock Super Absorber is scientifically engineered to absorb and retain extra-large amounts of exudate, allowing for fewer dressing changes and less risk of trauma and maceration of vulnerable skin.

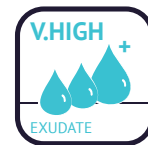

Key Functions and Features:

Medstock Super Absorber is designed to continuously absorb excess exudate away from the wound surface. This creates a negative pressure gradient, which helps to:

- + Promote healing and reduce infection risk by stimulating entry of new blood vessels, leucocytes, and fibrocytes into the wound
- + Absorb and retain moderate to very high levels of exudate
- + Manage weeping oedema and avoid maceration of the wound edge and periwound
- + Reduce the frequency of dressing changes
- + Safe for use under compression

Indications for Use:

- + Suitable for wounds with moderate to very high exudate
- + All types of dermal ulcers (pressure ulcers, venous ulcers, arterial ulcers, and mixed aetiology ulcers)
- + Skin grafts
- + Partial-thickness to full-thickness burns
- + Highly exuding surgical wounds and traumatic wounds
- + Secondary dressing over packed cavity wounds

MEDSTOCK HYDROGEL AMORPHOUS

Superior moisture donating gel that promotes autolytic debridement

Advanced Wound Care

Medstock Hydrogel is a clear gel offering excellent adhesion and absorption capabilities. Containing propylene glycol, it helps attract and lock in moisture within dry wound environments while also absorbing excessive exudate. This assists in facilitating gentle autolytic debridement of devitalised tissue, which in turn promotes early epithelialisation and reduces wound healing time.

Key Functions and Features:

- + Donates moisture without causing maceration of the wound edge or periwound
- + Non-adherent to wounds
- + Provides pain-relieving properties
- + Facilitates autolytic debridement
- + Accelerates the wound healing process

Indications for Use:

- + Suitable for wound with nil to low exudate
- + Dry necrotic tissue requiring rehydration to aid autolytic debridement
- + Diabetic ulcers
- + Cavity or sinus wounds
- + Venous ulcers
- + Pressure injuries
- + Superficial to partial thickness burns

MEDSTOCK**TRANSPARENT
FOAM ISLAND****Multi-purpose foam dressing
for moderately leaking wounds**

Medstock Transparent Foam Island is a transparent, highly permeable polyurethane foam dressing that incorporates carboxymethylcellulose (CMC) hydrophilic granules within the dressing to promote wound healing.

Key Functions and Features:

- + Waterproof film protects against bacterial invasion
- + Embedded hydrophilic carboxymethylcellulose (CMC) granules help to maintain a moist environment that promotes wound healing
- + Absorbs and retains exudate
- + Non-adherent, preventing damage to healing tissue
- + Gentle, flexible, and comfortable on the skin

Indications for Use:

- + Suitable for wounds with low to moderate exudate
- + Pressure ulcers
- + Venous ulcers
- + Arterial ulcers
- + Mixed aetiology ulcers
- + Small, partial-thickness burns

PROTECTIVE ON SKIN, Effective on wounds

Protective Care and Treatment of Pressure Injuries

MEDSTOCK SILICONE
FOAM RANGE

- ▶ Customised and shaped to provide an effective solution to managing pressure injuries
- ▶ Multilayered construction reduces the risk of friction and shear on vulnerable areas
- ▶ Gentle silicone adhesive minimises pain and trauma during dressing changes
- ▶ Can be lifted for frequent skin inspection without losing adherent properties

MEDSTOCK**SILICONE****FOAM SACRUM WITH BORDER**

Specifically designed to protect and treat injuries in the sacral area

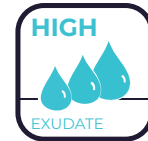

Medstock Silicone Foam Sacrum with Border is a highly absorbent 5-layer silicone adhesive foam dressing that is both gentle and conformable to vulnerable sacral areas, providing optimal cushioned protection. Its silicone adhesive skin contact layer provides secure adhesion whilst allowing frequent removal and reapplication for skin and wound assessment.

Key Functions and Features:

- High absorbency for efficient exudate management
- Silicone contact layer seals the wound edges, reducing risk of maceration or contamination from body fluids
- Heart-shaped design to provide good coverage to the sacral region
- 3-piece, non-touch application technique to protect against contamination
- May assist in protecting against extrinsic forces such as pressure, shearing, and friction
- Soft, elastic, and comfortable on the skin
- Protective barrier against water and bacteria
- Gentle and secure adherence
- Atraumatic on dressing removal
- Maintains a moist wound environment to promote healing
- Can be lifted and adjusted without losing its adhesive properties, making skin inspection easy

Indications for Use:

- Suitable for sacral wounds with moderate to high exudate
- Pressure injuries of the sacral area
- Surgical incisions of pilonidal cysts
- Preventative management for areas at risk of pressure injury

MEDSTOCK

SILICONE FOAM HEEL AND JOINT WITH BORDER

Specifically designed for protecting and treating heel injuries

Protect and Treat

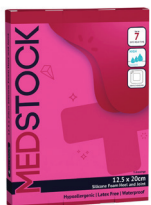

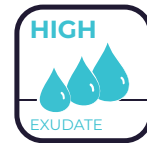

Medstock Silicone Foam Heel and Joint with Border is a highly absorbent, 5-layer silicone adhesive foam dressing that is both gentle and conformable to vulnerable skin areas, such as those overlying and surrounding the heel and other joints like the elbow. Its silicone adhesive skin contact layer provides secure adhesion whilst allowing frequent removal and reapplication for skin and wound assessment.

Key Functions and Features:

- ✦ High absorbency for efficient exudate management
- ✦ Silicone contact layer seals wound edges, reducing the risk of maceration
- ✦ Shaped to provide good coverage to the heel
- ✦ May assist in protecting against extrinsic forces such as pressure, shearing, and friction
- ✦ Soft, elastic, and comfortable on the skin
- ✦ Protective barrier against water and bacteria
- ✦ Gentle and secure adherence
- ✦ Atraumatic on dressing removal
- ✦ Maintains a moist wound environment to promote healing
- ✦ Can be lifted and adjusted without losing its adhesive properties

Indications for Use:

- ✦ Suitable for heel or joint wounds with low to high exudate
- ✦ Diabetic ulcers
- ✦ Treatment for pressure injuries
- ✦ Preventative management for areas at risk of pressure injury
- ✦ Suitable for covering and protecting dry or necrotic wounds

MEDSTOCK FOAM TRACHE

Rapid absorption for optimal body fluid and exudate management

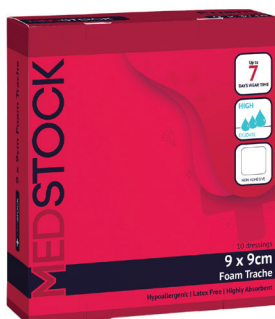

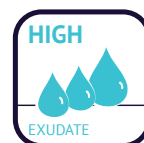

Medstock Foam Tracheostomy Dressing is an efficient polyurethane foam dressing featuring a versatile fenestration, allowing it to fit neatly around a tracheostomy tube, cannula insertion, external bone fixators, and various appropriately sized drainage tubes.

Key Functions and Features:

- + High absorbency and fluid handling capacity, minimising dressing changes
- + Reduces the risk of maceration to tracheal stoma sites and surrounding skin
- + Embedded with carboxymethylcellulose hydrophilic granules that promote a moist wound healing environment
- + Ability to vertically wick exudate away from the wound and hold exudate in the core of the foam
- + Non-adherent to the wound, preventing damage to healing tissue
- + Surface layer consists of a semi-permeable polyurethane film to protect the wound against water, bacteria, and foreign matter
- + Good elasticity and flexibility
- + Provides cushioning under medical devices to help reduce risk of pressure injuries
- + Provides odour control

Indications for Use:

- + Tracheostomy sites
- + Cannula sites
- + External bone fixators
- + Various appropriately sized drainage tubes

MEDSTOCK FOAM HEEL

Highly absorbent and protective heel dressing

Protect and Treat

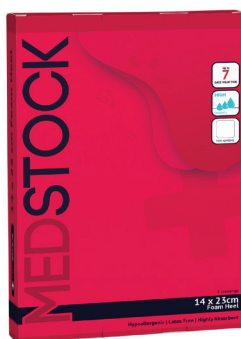

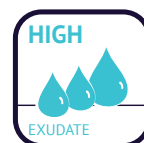

Medstock Foam Heel Non-Adhesive Dressing is a highly absorbent, polyurethane foam dressing that has been specifically designed to comfortably fit around the heel contour. It contains carboxymethylcellulose (CMC) hydrophilic granules that promote and maintain a balanced, moist healing environment.

Key Functions and Features:

- + High absorbency and fluid handling capacity
- + Promotes a moist wound healing environment
- + Designed to cover the malleolus area as well as the heel for superior cushioned protection
- + Ability to vertically wick exudate away from the wound and retain exudate in the core of the foam
- + Contoured design ensures a snug fit and optimal conformity on the heel
- + Non-adherent to the wound, preventing damage to healing tissue

Indications for Use:

- + Suitable for wounds with low to high exudate
- + Adaptable to different phases of wound healing
- + Pressure ulcers
- + Can be incorporated into a pressure injury prevention management plan

- LATEX FREE

MEDSTOCK COHESIVE BANDAGE

Lightweight, versatile and self-adhesive support

Medstock Cohesive Bandage is a lightweight, highly conformable bandage made from non-woven fabric coated with a gentle and hypoallergenic synthetic adhesive. Its ability to adhere to itself rather than skin allows easy, convenient application without the need for tape or other fixatives.

Key Functions and Features:

- + Suitable for a wide range of uses in medical, sports and veterinarian industries
- + Sticks to itself and not to skin or body hair
- + Perfect for securing primary wound dressings while protecting vulnerable skin
- + Offers controlled, gentle compression to support healing wounds
- + Conforms to and supports mobile body structures like muscles and joints
- + Highly flexible and durable
- + Superior tensile strength
- + Excellent moisture vapour permeability
- + Good tearability, making it easy to remove
- + Latex free and hypoallergenic

Indications for Use:

- + To support and secure wound dressings and external medical devices
- + To provide support for soft tissue and joint injuries
- + Provides light compression to support wound healing

MEDSTOCK**CONFORMING
ELASTIC BANDAGE**

Soft and flexible conforming bandage

Medstock Conforming Elastic Bandage is a soft and lightweight bandage made from a unique blend of cotton, viscous, and polyester, making it highly elastic and able to conform to awkward body areas.

Key Functions and Features:

- + Soft and gentle on skin
- + Highly stretchable
- + Highly permeable to moisture and air
- + Conforms well to awkward areas of the body
- + Lightweight, fray resistant and durable
- + Non-sterile and latex free

Indications for Use:

- + Ideal for binding various body parts
- + May be used to support sprains and soft tissue injuries
- + Secure and protect wound dressings when the use of adhesives is unsuitable due to allergies or the delicate condition of the skin

MEDSTOCK

FILM ROLL

Ultra-thin with a high moisture vapour transmission rate

Medstock Film is a transparent, highly permeable adhesive polyurethane (PU) film roll, designed to protect and secure a wide variety of primary dressings and other medical devices to the skin.

Key Functions and Features:

- + Transparent and waterproof
- + Extra thin with superior moisture vapour permeability to aid wound healing
- + Reduces the risk of maceration by retaining natural wound exudates and allowing excess to evaporate
- + Does not leave adhesive residue on skin upon removal
- + Roll design and grid mapping facilitates easy use and cost-effectiveness

Indications for Use:

- + Ideal for waterproofing and secure fixation of a wide variety of primary dressings and other medical devices to the skin
- + Provides protection against skin friction
- + Offers a barrier against water and bacteria
- + Suitable for use on flexible areas, such as fingers, elbows and knees

MEDSTOCK NITRILE GLOVES

Exceptional durability, tactile sensitivity
for premium hand protection

Medstock Blue Nitrile Examination Gloves are medical grade and are specifically designed to give users a high level of comfort due to their elastic synthetic structure and unique textured fingers that enable a more firm grip.

Medstock Blue Nitrile Examination Gloves particularly suit those who suffer latex and skin allergies as they are latex and powder free.

Key Functions and Features:

- + Standard cuff, Powder free, Latex free, Non-Sterile |Ambidextrous
- + Not made with natural rubber latex
- + Superior strength, providing better puncture resistance
- + Superior comfort levels with a softer, more elastic nitrile formulation
- + Textured fingertips to enhance wet and dry grip
- + Beaded cuff ensures easy donning and prevents roll down
- + Approved to use with chemotherapy drugs

Sterilisation Method **NON-STERILE**

MEDSTOCK NITRILE GLOVES

Reliable protective barrier and comfort
for healthcare professionals

Medstock Violet Nitrile Examination Gloves are designed to ensure a strong barrier to harsh chemicals including some chemotherapy medications. These gloves are medical grade and are specifically designed to give users a high level of comfort due to their elastic synthetic structure and unique textured fingers that enable a more firm grip.

Medstock Violet Nitrile Examination Gloves particularly suit those who suffer latex and skin allergies as they are latex and powder free

MEDSTOCK**LV 4 ISOLATION****GOWNS****Advanced barrier performance in high-risk clinical settings**

Medstock's AAMI Level 4 Isolation Gowns are made from polypropylene spunbond nonwoven (PPSB) material, which is designed for excellent breathability and comfort. The outside layer of the isolation gown is coated with polyethylene (PE) material, which provides a waterproof and impermeable barrier against liquid borne microbes (e.g. bile and blood).

Key Functions and Features:

- + Can be used in the following settings: Med/Surg Unit, Infection Control and Phlebotomy
- + Durable and lightweight, yet providing strength and protection for tasks
- + Tape design and heat-sealed seams provide high performance on fluid impact and hydrostatic pressure (protection against liquid and particles)
- + Gown ties at the waist and neck to allow for ultimate protection and is easily adjustable to suit your body/size
- + Unisex and Universal Size

Material Specification and Components

- + Material: 55% PP / 45% PE
- + Colour: Yellow
- + Fabric weight: 36gsm
- + Cuffs: Knitted
- + Non-sterile
- + Gown ties: Waist and neck

**Key Dressing Function and Features:**

- + Can be used in the following settings: ICU, Dialysis, Med/Surg Unit, Pathology and Laboratories
- + Durable and lightweight, yet providing strength and protection for tasks
- + Gown ties at the waist and neck to allow for ultimate protection and is easily adjustable to suit your body/size
- + Unisex and Universal Size

MEDSTOCK**LV 2 ISOLATION****GOWNS****Reliable barrier performance in low-risk clinical settings**

Medstock's AAMI Level 2 Isolation Gowns are a disposable, fluid resistant gown with excellent breathability, allowing comfortable ventilation through the fabric. It is made up of 4 layers of SMMS material which provides protection against fluid penetration.

Material Specification and Components

- + Material: 100% PP SMMS
- + Colour: Yellow
- + Fabric weight: 25gsm
- + Cuffs: Knitted
- + Non-sterile
- + Gown ties: Waist and neck
