

premium LIFTER 180

Compact mobile patient lifter for professional or home care use.

The Premium Lifter 180 is a lightweight, easy to operate mobile lifter that allows patients to be lifted and transferred from floor, bed or chair with ease and safety.

With low lifting height and soft start / stop function, this lifter has been designed to provide patient and carer with optimum comfort, safety and security.

premium LIFTER 180

With maximum user capacity of 180 kg, this ergonomic lifter is constructed with a powder coated aluminium frame for lightweight manoeuvrability and easy wipe down cleaning.

height adjustable frame

The frame features an upright mast and an angled boom. Three height settings are available to ensure overall mast height can be set to match environmental and lifting needs. A quick release hook system allows quick and easy installation of the sling bar.

stable and manoeuvrable

Swivel style, 75 mm 3" front and 100 mm 4" rear castors, including foot operated step-on lockable brakes on both rear castors.

The 'U' shaped base functions electrically, with leg opening operated via the handheld controller. The wide flanged front legs offers enhanced stability and ease of access around furniture.

compact storage

For ease of storage or transportation, the mast can be easily removed from the base without the need for tools.

electronic hand controller

The handheld controller features an extendable cord with simple push buttons for raising/lowering the lifter and opening/closing the base legs. The controller also displays overload indicator, battery charge and service status lights for easy visibility. The handheld device can be hung on the lifter when not in use.

intelligent in-built diagnostics

The rechargeable battery, mounted low on the mast of the lifter, features the advanced Linak® Jumbo Care Diagnostic Control System. This intelligent diagnostic system alerts caregivers when the lift is ready to use and when it is time for service.

The lightweight, environmentally-friendly battery is easy to handle and easy to recharge via connection to mains power. Safety features include an emergency stop button and emergency lowering device.

pivot frame

An optional pivot frame provides enhanced patient positioning and comfort and improved balance point (uses pivot slings with keyhole fittings).

slings

A range of slings can be used with the lifter in sizes ranging from S to XXL, including the ProSling Yoke, Pivot and Disposable slings.

ergonomic design allows for easy removal of yoke attachment

quick release yoke spreader bar

hand controller displays lift and leg spreader function

sturdy handles with textured powder coating for increased comfort

lightweight aluminium structure with powder coated finish

emergency lowering device

new Linak® Jumbo Care Actuator System, which displays battery and service status

low mounting actuator and battery for maximum stability

quick tool-less removal of mast from base, for transport and storage

wide, flanged leg for stability and ease of access around furniture

three available height settings

lockable rear castors

electric leg spreader for maximum control
